

Everything left to finish: alloceraintelligence.com

Updated Sept 29, 2026 (afternoon). **Done and live: 23 pages and posts, plus the chatbot.** Built and waiting for Nick to paste: the blended-accuracy fix on 22 pages (section 0). This file lists everything still to do, in order.

To pick up again, tell Claude: "Open website/REMAINING.md and do the next item."

The rules

- **Wait for Nick's go.** When Nick replies, stop and wait for his permission before doing anything. Answer the question he asked, and nothing more.
- **Pages vs posts:** a "post" is a blog article, and a page is a page. Never mix the two words up.
- **Pages:**
 - Use the site's own design: nav, hero background, blue buttons, fade-ins, footer, FAQ schema, intake form.
 - Keep the original page's artwork, videos, screenshots, style and links. Nothing from the original gets dropped without asking Nick.
- **Posts:** keep the article style.
- **Images (Sept 29):**
 - Only use images already in the WordPress Media library:
 - client portal screenshot 2026/09/Client-portal-for-cdai-example.png
 - dashboard screenshot 2026/06/AC777057-...png
 - process diagram 2026/06/B4457BA3-...png
 - portal video and its still frame, logo, hero background
 - Never make new images, never use AI images, never put numbers in an image.
 - If a page needs a new image, stop and ask Nick.
- **Check before sending:** run `python3 website/check_images.py <file>` on every page or post. It must report 0 image links not on the live site, or the file does not go out.
- **Business voice:**
 - The chatbot is VINDEK, speaking for Allocera Intelligence. It never uses Nick's name or personal email.
 - Anywhere else, Nick's name stays or goes only on Nick's say.
- **Never:**
 - delete or retire a page
 - touch Apex data
 - give away anything sensitive or proprietary
 - use the fake 80%, "cost layers" or "never assumes costs"
 - quote one blended accuracy number (Nick, Sept 29). Per-decision numbers only: scale 98.0%, hold 95.2%, pause 85.2%, flag 70.9%, cut 55.6%*, investigate 100% (n=2), renegotiate 100% (n=1). The old 89.5% (and 77.9% to 89.5%) is retired.
 - say "CallRail Partner", or put CallRail's logo on the site, until CallRail approves it in writing
- **For each page or post, Claude sends only:**
 - the old title
 - the edit link (by post ID)
 - the live URL
 - the HTML file
 - the Rank Math box

- **Before deleting anything in WordPress:** check that the permalink matches the live URL.
- **Every build uses the tools:**
- keyword research, live Google results, Search Console
- a real image already in Media, internal and external links, GA4
- a render check, a claims table
- **Order:** highest ROI first. Redirects, the final homepage and blog paste, and the link re-scan come last.

0. Blended-accuracy fix: paste these first (built Sept 29, branch `fix/remove-blended-accuracy-sept29`)

Nick's rule: **no single blended accuracy number anywhere**. The live site still shows "89.5% accurate overall" until these are pasted. Every edit link and live URL is in `FIX_LIST.md` section E. Order matters because the CallRail email links to the first four.

Paste order	Post ID	Live URL	File
1	850	/home-sample/contribution-margin-marketing/	pages/contribution-margin-marketing.html (also removes "cost layers"; replaces item 2 below)
2	457	/proof/	pages/proof.html (Rank Math SEO title changes)
3	451	/how-it-works/	pages/how-it-works.html
4	133	/allocera-intelligence-case-study-proof/	pages/allocera-intelligence-case-study-proof.html
5 to 22	252, 483, 478, 228, 284, 267, 501, 245, 322, 506, 563, 654, 646, 301, 260, 308, 294, 187	see <code>FIX_LIST.md</code> E5 to E22	matching files in <code>website/pages/</code> (252 also changes its Rank Math meta description; 187 is the blog, re-paste at the end)

- ☒ Nick pastes pages 1 to 4 (done Sept 29). The four were rebuilt the same afternoon on the homepage's own styles (gold logo, readable text, working form); use the newest files on branch `fix/remove-blended-accuracy-sept29`. **After pasting: submit each page's form once to confirm Formspre.**
- ☐ Nick pastes pages 5 to 22
- ☐ Claude re-scans a fresh export: 0 matches for "89.5", "77.9", "1,210"

0b. CallRail (Sept 29 call; waiting on Nick and CallRail)

- ☐ **Follow-up email to Karina and Eric:** draft v4 is ready. Nick sends it after section 0 pages 1 to 4 are live.
- ☐ **CallRail page and logo on the homepage: on hold.** Wait for CallRail's written OK, their brand and logo guidelines, and the API/sandbox access. Never write "CallRail Partner" before then. When approved: one homepage pass, then a CallRail page, both on Nick's approve/reject list first.

- ☐ **Text-only mention that CDAI connects to CallRail** (true today: the nightly sync is built). Claude checks the homepage first and proposes it for the next homepage pass.
- ☒ **Demo org fees zeroed Sept 29** (assumed platform fees \$15,904.55 and compliance cost \$1,225.25 set to \$0, Demo org only; backup table `zz_demo_fee_backup_20260929` for rollback). Nick to look at the Demo dashboard cards.
- ☐ **Saved:** the founder-approved capability list is in `docs/CDAI_CAPABILITIES_LIST.md` in `cdai-engine` (merged to main).

1. Pages left (6 to build, 1 on hold)

#	Post ID	Current title	Edit link	Live URL	Job
1	342	CDAI Engine OAuth validation (score 76)	https://alloceraintelligence.com/wp-admin/post.php?post=342&action=edit	https://alloceraintelligence.com/case-study-2-oauth-validation/	Next up. Full rebuild in site design as the connection case study. Keep: May 23, 2026 HubSpot one-click connection, 47 contacts, empty UTMs flagged, no decisions issued. Drop the multi-tenant and "zero PII" claims.
2	850	Built Sept 29, waiting to paste (section 0). Contribution Margin Marketing: What It Means, and Proof the Math Holds Up (77)	https://alloceraintelligence.com/wp-admin/post.php?post=850&action=edit	https://alloceraintelligence.com/home-sample/contribution-margin-marketing/	Quick fix, done in <code>pages/contribution-margin-marketing.html</code> : removed "cost layers", pointed the <code>/seven-cost-layers/</code> link to <code>/marketing-costs/</code> , replaced the blended accuracy row. Still to do: set the featured image.
3	162	Terms (5)	https://alloceraintelligence.com/wp-admin/post.php?	https://alloceraintelligence.com/home-sample/terms/	Quick fix: remove the one "cost layers" mention; match site design.

2. Posts left (21), in order of search impressions

Not ICP: 7 posts are about law firms, mass tort or insurance. Each gets a **new ICP topic in the same post ID**, and the post is never deleted: - the new topic is picked with keyword research when its turn comes - the old URL gets a redirect to the new slug if the slug changes - the blog card is updated

All 21 have "cost layers" wording, and most link to old URLs. Each rebuild gets its own keyword, checked against the live pages so two pages don't compete for the same keyword.

Nick decides at the end: 501, Cost Per Signed Case (live, score 90), is a law-firm topic. Keep it, or swap it to an ICP topic in the same post ID.

3. Quick WordPress fixes (Nick, about 15 minutes, any time)

- ☑ **Broken image boxes (Nick, Sept 29): no made-up images.** Only real images already on the site are used, never AI images, and no numbers in images.

- DONE and re-pasted by Nick Sept 29: all 20. That's the 5 pages (About, How It Works, Dashboard, Proof, 133), 13 blog posts, and the Northbeam and Rockerbox pages. They now use the real portal screenshot, dashboard screenshot or diagram. No file on the site points to an image that isn't in Media.
- ☒ **Featured images:** set to the real portal screenshot during the Sept 29 image swaps. Still missing: 850, the validation report page. It gets set when that page is fixed in section 1.
- ☐ **Redo the homepage portal video (Nick, Sept 29).** On a big desktop screen, the hero video and screenshot show the whole portal shrunk into a small box, so nothing in it can be read (Nick's screenshot). Options for Nick to pick, nothing done until he does:
- **New recording (Nick):** zoom the browser in on the portal and record short clips of one thing at a time (the decision list, one campaign's numbers, the grade), instead of the whole screen at once. Use sample data only.
- **Bigger player:** Claude makes the video box wider on large screens and adds a click-to-enlarge (full screen). This is a code change only, and the same video stays.
- Best result: both.
- ☐ **Post 284 WordPress title:** <https://alloceraintelligence.com/wp-admin/post.php?post=284&action=edit>. Change it to `Salesforce Campaign Influence: 4 Things Campaign ROI Misses`.
- ☐ **Change the contact email in the legal documents (Nick, Sept 29).** The Terms and Privacy pages (posts 162 and 155, `originals/`) still show `baumnicholas@gmail.com`. Change it to `nick@alloceraintelligence.com`. Claude prepares the exact replacement text once Nick says go.
- ☐ **Paste the updated homepage (post 9) and blog (post 187)** sent Sept 28, if you haven't yet.

4. Last, after every page and post is done

4a. Redirects (Rank Math → Redirections → Add New → 301)

#	Source	Destination	Status

New	Any slug that changes during sections 1 and 2	its new URL	Add the same day (logged in REDIRECTS.md)

4b. Final checks and pastes

- ☐ **Fresh WordPress export (pages and posts):** Nick sends it. Claude re-scans every live link, and the target is 0 links to missing URLs.
- ☐ **Homepage:** a final re-paste with links to any new pages and posts.
- ☐ **Blog index:** a final re-paste with every new title. The law-firm and mass-tort cards are swapped for the new ICP posts.
- ☐ **Optional:** GA4 tracking on the 8 early pages that don't have it.

4c. Off-site

- ☐ **F6S profile:** change "Cost Distortion Attribution Intelligence" to **Capital, Decision, Accuracy, Intelligence**.
- ☐ **beehiiv:** remove "biweekly" so it matches the site.
- ☐ **Later (side idea):** Northbeam partnership outreach.

5. Chatbot (VINDEX)

- ☒ **Sept 29, live:** [cdai-engine PR #47](#) was merged to main.
- business voice, no personal name
- links to 23 live pages
- public Apex pilot facts and reviews
- not pitched to law firms, mass tort or insurance
- lead emails go to alloceraintelligence@gmail.com
- fixed the blank "rephrase" answers
- Sonnet 5.5
- ☒ **Proof page keeps its Apex Care Solutions pilot section (Nick, Sept 29).**
- ☐ **Only on the homepage.** Add the chat to every page. Waiting on Nick's OK.

- ☐ **Calculator results email** (`calculator_leads.py`) still says "speak with Nick directly" and shows the phone number. Waiting on Nick's call.

6. Not website (waiting on Nick)

- **Full test suite on the webhook fix (Nick's other session):** run `python cdai_test_suite.py` on branch `fix/webhook-compliance-default-zero` with production database access. Target: 70 pass, 0 fail. If it passes, Claude merges. The fix removes the last assumed \$0.25 default (`ingestion_pipeline.py:221`).
- **Render `STRIPE_MODE` (Nick):** Render → `cdai-engine` web service → Environment → look at the value of `STRIPE_MODE` . It must be `live` for real customers and `test` only while testing checkout. The code defaults to `live` (`billing.py:65`) when it is unset. The five Stripe keys are present.
- **Ad-spend sync for one-click Meta, Google and LinkedIn clients (engine change; waiting on Nick's go).** Today a self-serve client can connect Meta in one click, but their ad spend is never pulled, because the nightly sync only runs for orgs whose `orgs.api_sync_config` has a meta/google/linkedin block, and nothing writes that block. Proposed fix: on connect, find the ad account, get or create the channel, save the config, and run the first pull in the background. Design decision: which ad account when a client has several.
- **S1 security issue:** waiting on Nick's approval to fix it first.
- **D11:** PR #37 vs the cloud branches. Waiting on Nick's decision.

Where everything lives

What	Where
Built pages, Rank Math boxes, research	<code>website/pages/</code> (<code><slug>.html</code> , <code>-copy-paste.txt</code> , <code>-RANKMATH.md</code>)
Old made-up chart images (not used on the site, never upload)	<code>website/pages/images/</code>
Originals of every page (for recovery)	<code>website/originals/page-<ID>.html</code>
Full history and scores	<code>website/FIX_LIST.md</code>
Redirect details	<code>website/REDIRECTS.md</code>
Image check (run before sending)	<code>website/check_images.py</code>
